67	SQL commands for editing food items	High	None	2	Not Started	Kyle
69	SQL commands for completing vendor orders	High	None	2	Not Started	Kyle

Minutes from Previous Meeting

Our main focus needs to be creating and implementing the necessary queries for all of our POS system's functions. The templates for the different pages are also needing to be finished, and once these are connected, the rest of the project can be focused on optimizing the website. The way we have been committing to GitHub is good, but we need to distribute our individual commits a little more evenly, even if we work on parts together.
